### SUMMARY DESCRIPTION

Port Norfolk Historic District is a distinct early suburban neighborhood which encompasses approximately thirty city blocks located in the northern region of the city of Portsmouth. It is roughly bounded by the Elizabeth River to the north, industrial land east of Chautauqua Avenue and north of the Seaboard Coast Line Railroad to the east, Hartford Street between Broad Street and Douglas Avenue to the south, and Hull Creek and Douglas Avenue to the west. A typical grid pattern of streets divides the neighborhood into rectangular city blocks of approximately 600' by 300'. Each block is further divided into approximately twentyfive buildings lots, each lot facing the north-south extending streets that constitute the main thoroughfares within the district. These seventy foot-wide streets are named (from east to west): Chautauqua Avenue, Maryland Avenue, Broad Street, Mount Vernon Avenue, Florida Avenue, Douglas Avenue, and Hamilton Avenue. The secondary or east-west extending streets have very few building lots facing them. These fifty-foot wide streets include (from south to north): Hartford Street, Woodrow Street, Cleveland Street, Detroit Street, Wesley Street, Bruce Place, Rolfe Terrace, and Adriatic Street. At the northern boundary of the district, Bayview Boulevard extends east-west along the Elizabeth River with building lots facing north toward the street and river. The district contains an impressive collection of residential architecture, mostly dating from 1890-1910, which conveys the nostalgic image of a well-preserved turn-of-the-century community with a remarkably cohesive architectural fabric.

### ARCHITECTURAL ANALYSIS

Compatible in design, scale, and fabric, the residences of Port Norfolk present a variety of building styles prevalent at the turn of the century and into the 20th century. Queen Anne, Bungalow, and American Four Square architectural styles are well represented in the domestic architecture of the district. Most of the building stock is typical of middle-class residential housing of the period (213 and 331 Broad Street), however there are a number of impressive Queen Anne-style dwellings in the district that are more reflective of upper-middle-class fashion and tastes. The most prominent houses of this type are found along Bayview Boulevard (2701, 2713, 2801, 2813, 2901 Bayview Boulevard). These dwellings are mostly frame two-and-a-half-story structures that feature an interplay of various roof lines, gables, and turrets with conical roofs. A diversity of texture is achieved by the use of exterior wall shingles and slate roof tiles that are cut and arranged in decorative patterns. Each house also has a one-story porch with either Victorian period features such as spindle friezes, turned posts, and decorative sawnwork, or with classical-inspired features such as Tuscan columns and pediments. Many other Queen Anne-style houses or modified variants of the style are found in blocks nearest the river where real estate was most desirable, namely, the 100 block of Florida Avenue (108 and 146 Florida Avenue), the 100 block of Mount Vernon Avenue (140 and 149 Mount Vernon Avenue), the 100-500 blocks of Broad Street (158, 202, 500, and 559 Broad Street), and the 100 block of Maryland Avenue (107, 127 and 160 Maryland Avenue). A curious feature of many district houses (630 Broad Street, 301 and 401 Florida Avenue, 301 and 532 Maryland Avenue, 500 Broad Street, 146 Florida Avenue, 2701 Bayview Boulevard) is the metal roof cresting that extends along roof ridges and gables. Reminiscent of Oriental architecture, the cresting appears serpent-like in character and was probably

### Statement of Significance (in one paragraph)

#### STATEMENT OF SIGNIFICANCE

Port Norfolk, an architecturally cohesive turn-of-the-century planned suburb of Portsmouth, Virginia, has associations with historic developments in the region dating from the mid-18th century. The fabric of the neighborhood is in excellent condition with outstanding examples of middle- and upper-middle-class housing typical of the period. Domestic styles range from elaborate and well-preserved Queen Anne examples to the popular Bungalow of the first quarter of the 20th century. The site of Port Norfolk served successively as the rich glebe holdings of Portsmouth Parish and Trinity Church, later as a strategic landing point in the British capture of Portsmouth and Norfolk in the Revolution, and finally as a successful 19th-century farm. Beginning in 1890 with the formation of the Port Norfolk Land Company, and continuing to ca. 1920, the planned community provided healthful and attractive housing for employees of the expanding railroad and shipping facilities that adjoined it. Port Norfolk is exemplary of the widespread efforts in the late 19th and early 20th centuries to accommodate the growing demand for housing in an uncrowded neighborhood as well as to provide for the commercial, recreation and religious needs of its residents.

#### HISTORICAL BACKGROUND

The land on which Port Norfolk is located was occupied by colonial settlers as early as the late 17th century. In 1734 Port Norfolk and adjoining Pinner's Point, as well as most of present-day Portsmouth, were acquired by Col. William Crawford. Twenty years later, he laid out the town of Portsmouth into eighty lots. A parcel of that tract was set aside for Trinity Church (built 1761), the parish church of Portsmouth Parish, and one year later the parish vestry purchased from Colonel Crawford 175 acres encompassing Port Norfolk for their glebe lands. Glebe lands in 18th-century colonial Virginia were used to support the minister and his family as well as to meet other needs of the parish. The frame dwelling built shortly after 1762, which served as the glebe residence, stood facing the Elizabeth River at the corner of present Mount Vernon Avenue and Bayview Boulevard. Occupying these glebe lands were the first four rectors of Portsmouth Parish--Rev. Charles Smith (1762-1773), Rev. John Braidford (1772-1776), Rev. Arthur Emerson (1785-1801), and Rev. George Young (1801-1811). Mr. Emerson established the earliest school in the Portsmouth area, a glebe mission school, located just south of the proposed Port Norfolk Historic District in the 1800 block of Mount Vernon Avenue. According to the Rt. Reverend C. Charles Vache, historian of Trinity Church, it is likely that the glebe dwellings were abandoned shortly after 1811 and subsequently torn down.

The glebe lands also played a significant role in the Revolution in the Tidewater area of Virginia. It was in this area that British forces landed in 1779 in preparation for their capture of Portsmouth and then Norfolk. Apparently the glebe property was not occupied at that particular time, the Rev. Braidford having left to serve as a chaplain to the American forces.

7. DESCRIPTION--Architectural Analysis

inspired by the architectural treatise Impressions of Japanese Architecture written by the noted architect Ralph Adams Cram and published in 1905. The simple, two-story frame house is by far the most representative example of residential architecture in Port Norfolk. This vernacular house type usually has its gable end oriented to the street and features a three-bay facade, sometimes with a bay window, and an asymmetrically positioned door. A front porch with turned posts and turned balustrade is a popular feature that is found on nearly every house in the district.

Bungalows and modified variants of the style dating from the 1920s are also popular and are found throughout the district. They are 1½-story houses characterized by sweeping gable or hipped roofs with wide overhanging eaves, shed or hipped-roof dormers, and one-story porches with tapering square columns on brick pedestals (325 Hamilton Avenue, 149 Broad Street, 440 Maryland Avenue).

Another building type represented in the district's early 20th-century residential architecture is the American Four Square house with its typical square mass of two stories with a hipped roof, hipped or shed dormer, and asymmetrically positioned entrance in a two-bay facade (226 Broad Street, 401 Florida Avenue, 300 Douglas Avenue). The style proved popular with residents of Port Norfolk who built many variations on the American Four Square design.

Houses built between 1930-1950 are often frame or brick single-story, cottage-like residences exhibiting a variety of vernacular architectural features, however just as many residences denote eclectic styles. Some examples are more representative of period architecture of the mid-20th century than others. In particular those houses exhibiting vestiges of the Colonial Revival (230 Broad Street).

Single-family housing is predominant throughout Port Norfolk; however, there are a few multi-family housing units in the district. A few early 20th-century examples are seen on Mount Vernon Avenue (332, 105, 449-41 Mount Vernon Avenue). Dating from the 1920s and 1930s, these apartment buildings are two- or three-story brick structures with a single central entrance flanked by projecting porch towers of several stories.

Each porch has two tall brick columns surmounted by tapering square wood columns on the topmost floor. A common flat roof extends across both porch towers and the entrance bay. These apartment buildings are classic examples of what was a new phenomenon in housing of the early 20th century.

A small commercial area in the center of the district is located at the intersection of Broad and Detroit streets. Mostly small businesses serving the needs of Port Norfolk residents, they include a few turn-of-the-century and early 20th-century brick and frame commercial vernacular structures (400 Broad Street) and an abandoned service station.

Considering the size of the district and the number of buildings it contains, there are relatively few modern intrusions in Port Norfolk. The incompatible structures that do exist are usually tract or ranch houses which usually differ in scale, rhythm, and building material with the predominant turn-of-the-century and early 20th-century architecture.

7. DESCRIPTION--Architectural Analysis

Practically all the earlier buildings of Fort Norfolk are set back from the street a set number of feet, creating a strictly regulated cadence of facades. The streets are also lined with concrete walkways and curbs as well as rows of mature shade trees which add a picturesque quality to the streetscape of this proud residential neighborhood.

DE

8. SIGNIFICANCE--Historical Background

As a result of the Confiscation Act of 1802, all Episcopal churches in Virginia were forced to give up their glebe lands; however, due to numerous legal challenges to the Assembly's act, it was not until 1815 that the Portsmouth glebe lands were auctioned and the proceeds assigned to the local overseers of the poor. The subsequent owners including John Thompson, grandfather of a later mayor of Portsmouth, farmed the 175-acre tract throughout most of the 19th century.

With the extensive development of the railroads and resulting increase in shipping and manufacturing in the Norfolk/Portsmouth area by the late 19th century, the Norfolk Land Company was founded by a group of Northern investors who purchased the 175-acre parcel in 1890. Gen. K.H.K. Douglass, Confederate veteran and later adjutant general of the state of Maryland, served as the company's first president. The company, whose name is a combination of "Portsmouth" and "Norfolk," proceeded to lay off the subdivision into house lots of approximately 40' by 140'. In the late 19th century, a number of planned suburban neighborhoods capitalized on the growing demand for housing away from unhealthy and crowded cities. Promotional material of the day commended the "fresh, wholesome air," and the "splendid view of the harbor."<sup>2</sup> Port Norfolk's simple grid street plan was similar to that of most of the Ghent neighborhood in Norfolk (NRHP 1980) with the most sought-after building lots being of somewhat larger dimensions and on the water. However, Port Norfolk differed from Ghent in that the great majority of residents were laborers in the rail, shipping, and manufacturing centers that bordered the neighborhood on the east and south leading to the dock area. The railroad track over which was hauled thousands of tons of southwest Virginia coal still forms the southeastern boundary of the district.

Also stimulating the successful growth of Port Norfolk and giving its residents access to the downtown was the horse-drawn streetcar line installed along Mount Vernon Avenue in 1895. Conversely, construction of a fishing pier with a pavilion on the waterfront at the corner of Bayview and Chataqua and of the Chesapeake Hotel, served to attract visitors to the community from nearby Portsmouth and Norfolk. The beach became popular for swimming and fishing, and the pavilion and hotel became social centers. Most of the housing standing in Port Norfolk was built between 1890 and 1920. A school--Port Norfolk Graded School (no longer standing), and three churches--Port Norfolk Baptist, Wesley Methodist, and St. Stephen's Episcopal (now Port Norfolk Pentecostal Assembly)--all date from Port Norfolk's heyday. An examination of city directories for 1920 reveals that Port Norfolk had its own railway depot, railway express office, (in the 600 block of Broad Street) pharmacy, bakery, and grocery store. Playgrounds for Negro and white children were located in the 600 block of Broad Street and the 800 block of Mount Vernon Avenue, respectively.

8. SIGNIFICANCE--Historical Background

In 1918 the Port Norfolk neighborhood was annexed to the city of Portsmouth under the name of "Washington Ward."<sup>4</sup> At the time of annexation Port Norfolk remained a high-density, primarily white neighborhood containing a mixture of large and small dwellings. Most of the houses, both large and modest, had porches to avail themselves of the "fresh air" off the harbor. City directories of the period indicate a large number of residents were employed by the railroads as conductors, superintendents, and yard masters, or in the factories as electricians, mechanics, and clerks.

Port Norfolk since World War I has remained an architecturally cohesive community with a strong sense of neighborhood identity. In the 1970s, the Port Norfolk Civic League was formed to prevent speculative developers from converting single-family dwellings into multi-family apartments. There is considerable local interest in preserving the neighborhood as evidenced by the recent designation, with neighborhood support, of Port Norfolk as an historic district under the historic district code of the city of Portsmouth.

10. GEOGRAPHICAL DATA--Verbal Boundary Description & Boundary Justification

then S to S pl of 546 Chautauqua, then W to SW cor. of 546, then S to N side of Woodrow St.; on the S by a line ext. from latter pt. W to W side of Maryland Ave.; thence S to RR tracks and S pl of playground, then W to W side of Broad St., the S to N side of Hartford St., then W to SW pl of 3009 Hartford; and on the W by a line ext. from latter pt. N along alley to NW pl of 630 Douglas Ave., then NE to SW cor. of 611 Douglas, then N along SE pl of 611 to NE cor. of same, then W to SE cor. of 2905 Woodrow, then N to N side of Woodrow, then E to W side of Florida Ave., then N to S pl of 530 Florida, then W to E side of Douglas (ext.), then N to N side of Detroit St., then W to E side of Hull's Creek, then N along creek to Bayview Blvd. Boundary Justification: The boundaries of the Port Norfolk Historic District have been drawn to coincide insofar as possible with the original bounds of the 1890 development of the Port Norfolk Land Company. (See Map #3). The northern boundary follows the Western Branch of the Elizabeth River; the eastern boundary has been drawn to exclude the area devoted exclusively to industry; the southern boundary has been drawn to exclude 1950s housing and the land devoted to heavy commercial use; the western boundary follows the banks of the creek that empties into the Western Branch. The portion of the original Port Norfolk subdivision that lies south of the Seaboard Coast Line right-of-way, no longer retains its architectural integrity and has been replaced with post-World-War-II housing and heavy commercial land use. Fringe areas of the original subdivision have been excluded because of the high percentage of noncontributing structures.

7. DESCRIPTION (CON.) Criteria for noncontributing structures

Noncontributing structures are those elements which do not contribute to the overall cohesiveness of the district. They are not compatible in design, scale, or fabric. In some cases, the contributing structures may be less than 50 years old; however, these buildings maintain the integrity of the district in use, design, scale, and fabric. They also maintain the facade line and the aesthetics of the streetscapes of the neighborhood.

SUMMARY OF NONCONTRIBUTING STRUCTURES

Bayview Boulevard: 2501, 2525, 2609, 2915

Broad Street: 100-102, 104, 106, 108-110, 162, 254, 352-356, 429, 533, 554-556, 600

Bruce Place: 117, 119, 120

Chatauqua: 160, 216-220, 231, 235, 238, 239, 301, 312, 411, 415, 416, 423, 440, 507, 511, 513

Detroit Avenue: 2715-2717
